

## Zika Virus screening for Directed Semen Donors

### UIC Andrology Lab

FDA guidance recommends physician review of relevant medical records for directed semen donors including a review of travel history. The review must indicate that a potential donor is free from risk factors or clinical evidence of Zika virus infection for the purpose of determining donor eligibility.

The directed donor will be considered **ineligible** if the following apply:

1. He has a medical diagnosis of Zika infection in the past 6 months.
2. Residence in, or travel to, an area with active Zika virus transmission within the past 6 months.
3. Sex within the past 6 months with a male who is known to have either of the risk factors listed above.

The directed donor's physician must provide documentation to the UIC Andrology lab stating that screening for Zika virus risk factors was done. (See Physician screening form)

**Version: 3/9/2016**

## Physician Screening for Zika Virus Risk Factors

### For Directed Semen Donors

I, Doctor \_\_\_\_\_ have screened the following Directed Semen Donor , \_\_\_\_\_, for the following Zika virus risk factors:
